Type of House Foundation

Type of Outer Wall

Type of Roof

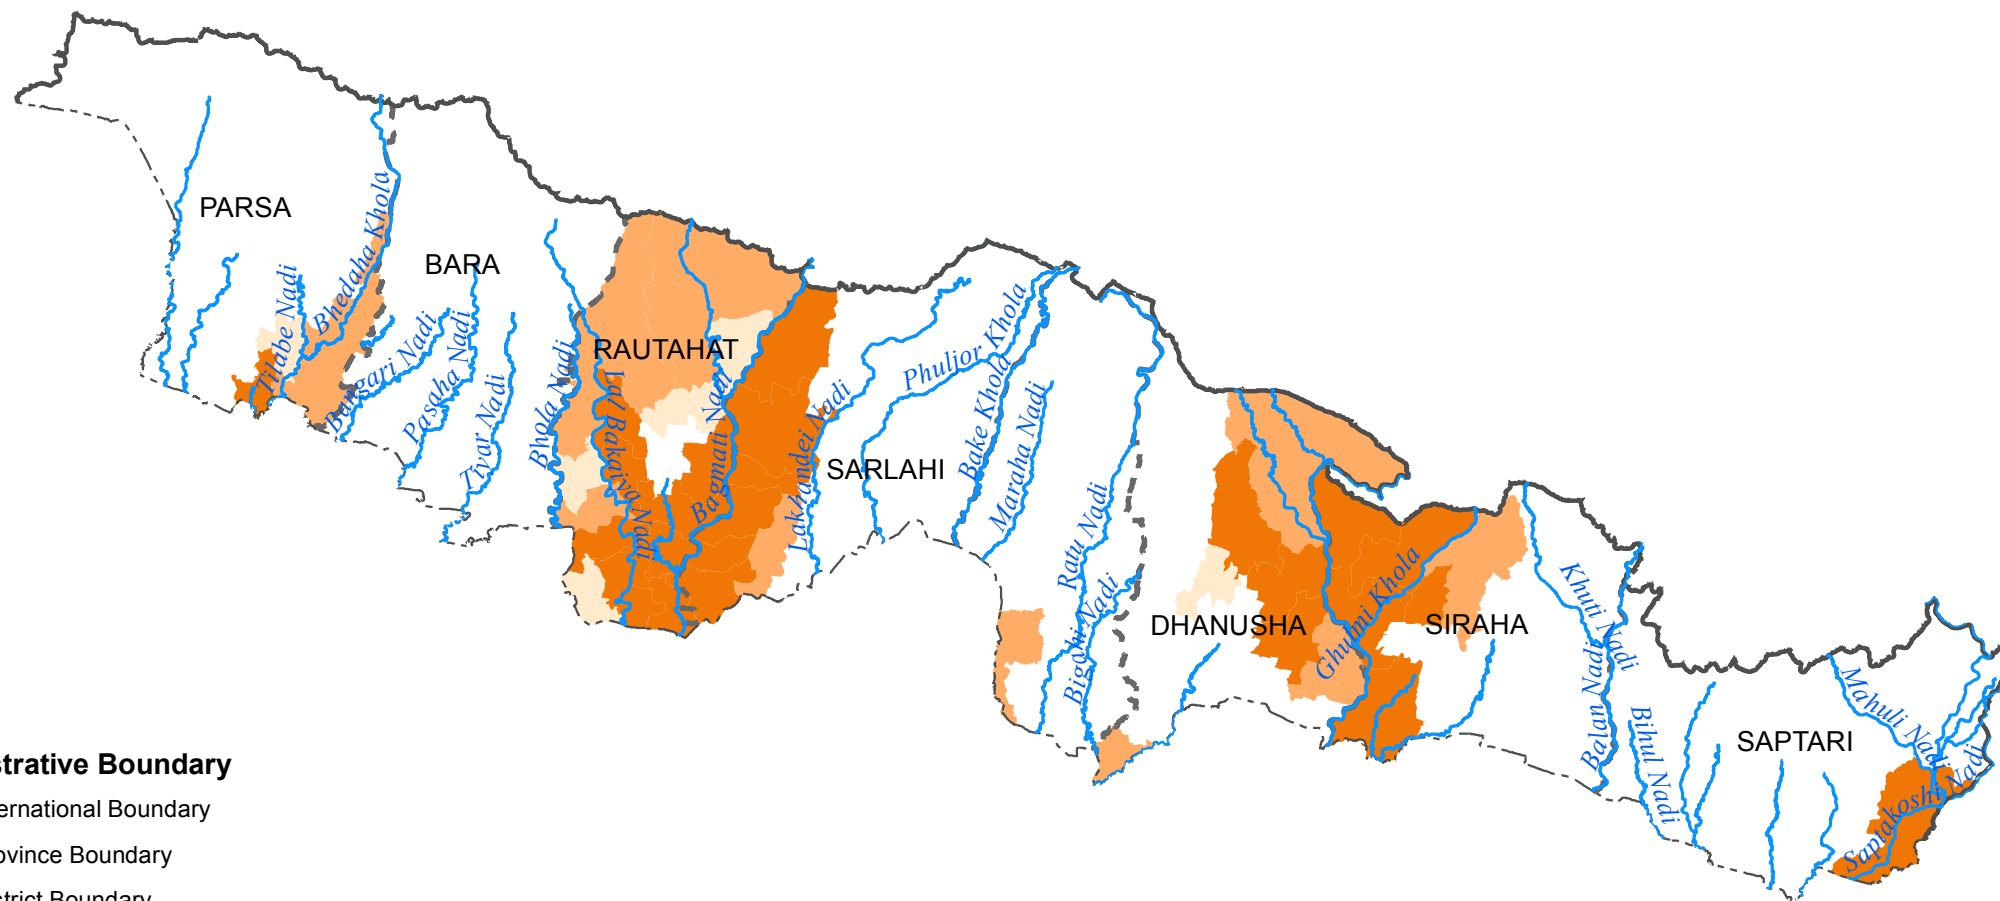

Menstrual Hygiene

% of women using appropriate menstrual hygiene materials

% of women with a private place to wash and change

| | Rural | Urban |
|--|--------|--------|
| % of women using appropriate menstrual hygiene materials | 95.6 % | 95.2 % |
| % of women with a private place to wash and change | 84.3 % | 87.6 % |

Nepal: Annual expected exposed people to perennial river floods (ProvinceTwo)

Administrative Boundary

- International Boundary
- Province Boundary
- - - District Boundary
- Major Rivers

No. of people expected to be exposed to Perennial Flood per year

- Low
- Moderate
- High

The classification is based on quantile distribution of the calculated values at municipality level. The map shows the relative classification across the country.

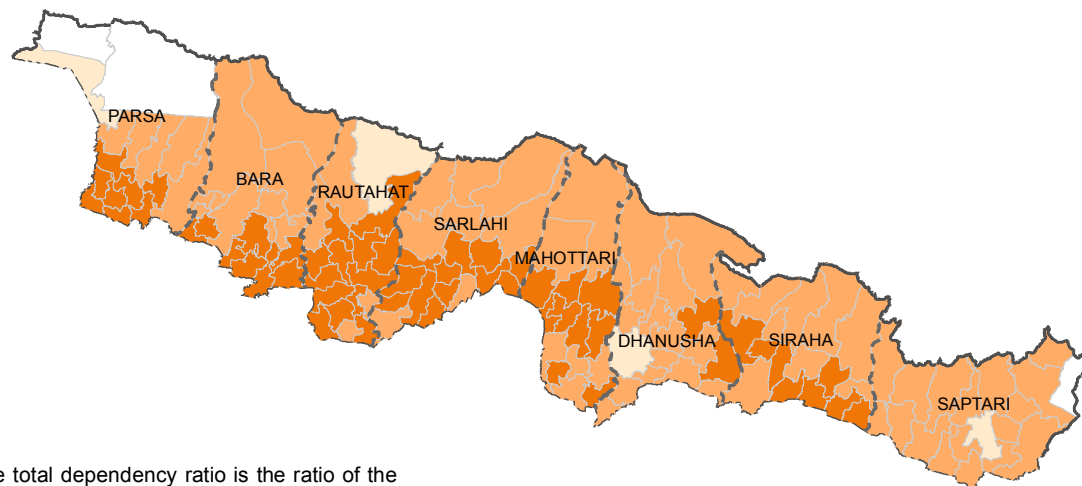

The indicator is based on the estimated average number of people expected to be exposed to perennial river floods per year. It results from the combination of the perennial flood hazard zones as defined by the perennial flood hazard map (25-year return period) and the total population living in the exposed areas as per the population density map. The expected number of people exposed in the hazard zone in one year is the yearly average of the total population living in the exposed area.

World Food Programme (WFP)

Vulnerability Indicator - Province Two

Age dependency ratio %

The total dependency ratio is the ratio of the sum of the population aged 0-14 and that aged 60+ to the population aged 15-59. The ratio is presented as number of dependants per 100 persons of working age (15-59).

Legend

Administrative Boundary

Inequality

The classification is based on quantile distribution of the calculated values at municipality level. The map shows the relative classification across the country.

Map data source(s):
Central Bureau of Statistics (CBS)

Dalit Population: Dalits (the lowest strata of the Hindu caste system) are considered “untouchable” and encounter systemic social and economic exclusion

GDI: It measures achievements in the same basic capabilities (dimensions) as the Human Development Index but takes into consideration inequality in achievements between women and men

GEM: It seeks to determine how much women have been empowered or enfranchised to take part in different aspects of public life in comparison with men

Inequality is calculated taking average of Dalit population data, Gender Development Index (GDI) and Gender Empowerment Measure (GEM).

Nepal: Disease Burden Rate Map (Province Two)

Acute Gastro Enteritis rate

Acute Gastro Enteritis (AGE) is an endemic and re-emerging disease, in particular during the rainy season.

The estimated number of Acute Gastro Enteritis cases arising in a given year, expressed as the rate per 100 000 population.

Administrative Boundary

- International Boundary
- Province Boundary
- District Boundary

SARI rate

- Low
- Medium
- High

Sudden Acute Respiratory Illness (SARI) rate

Sudden Acute Respiratory Illness (SARI) is an endemic and re-emerging disease, in particular during the rainy season.

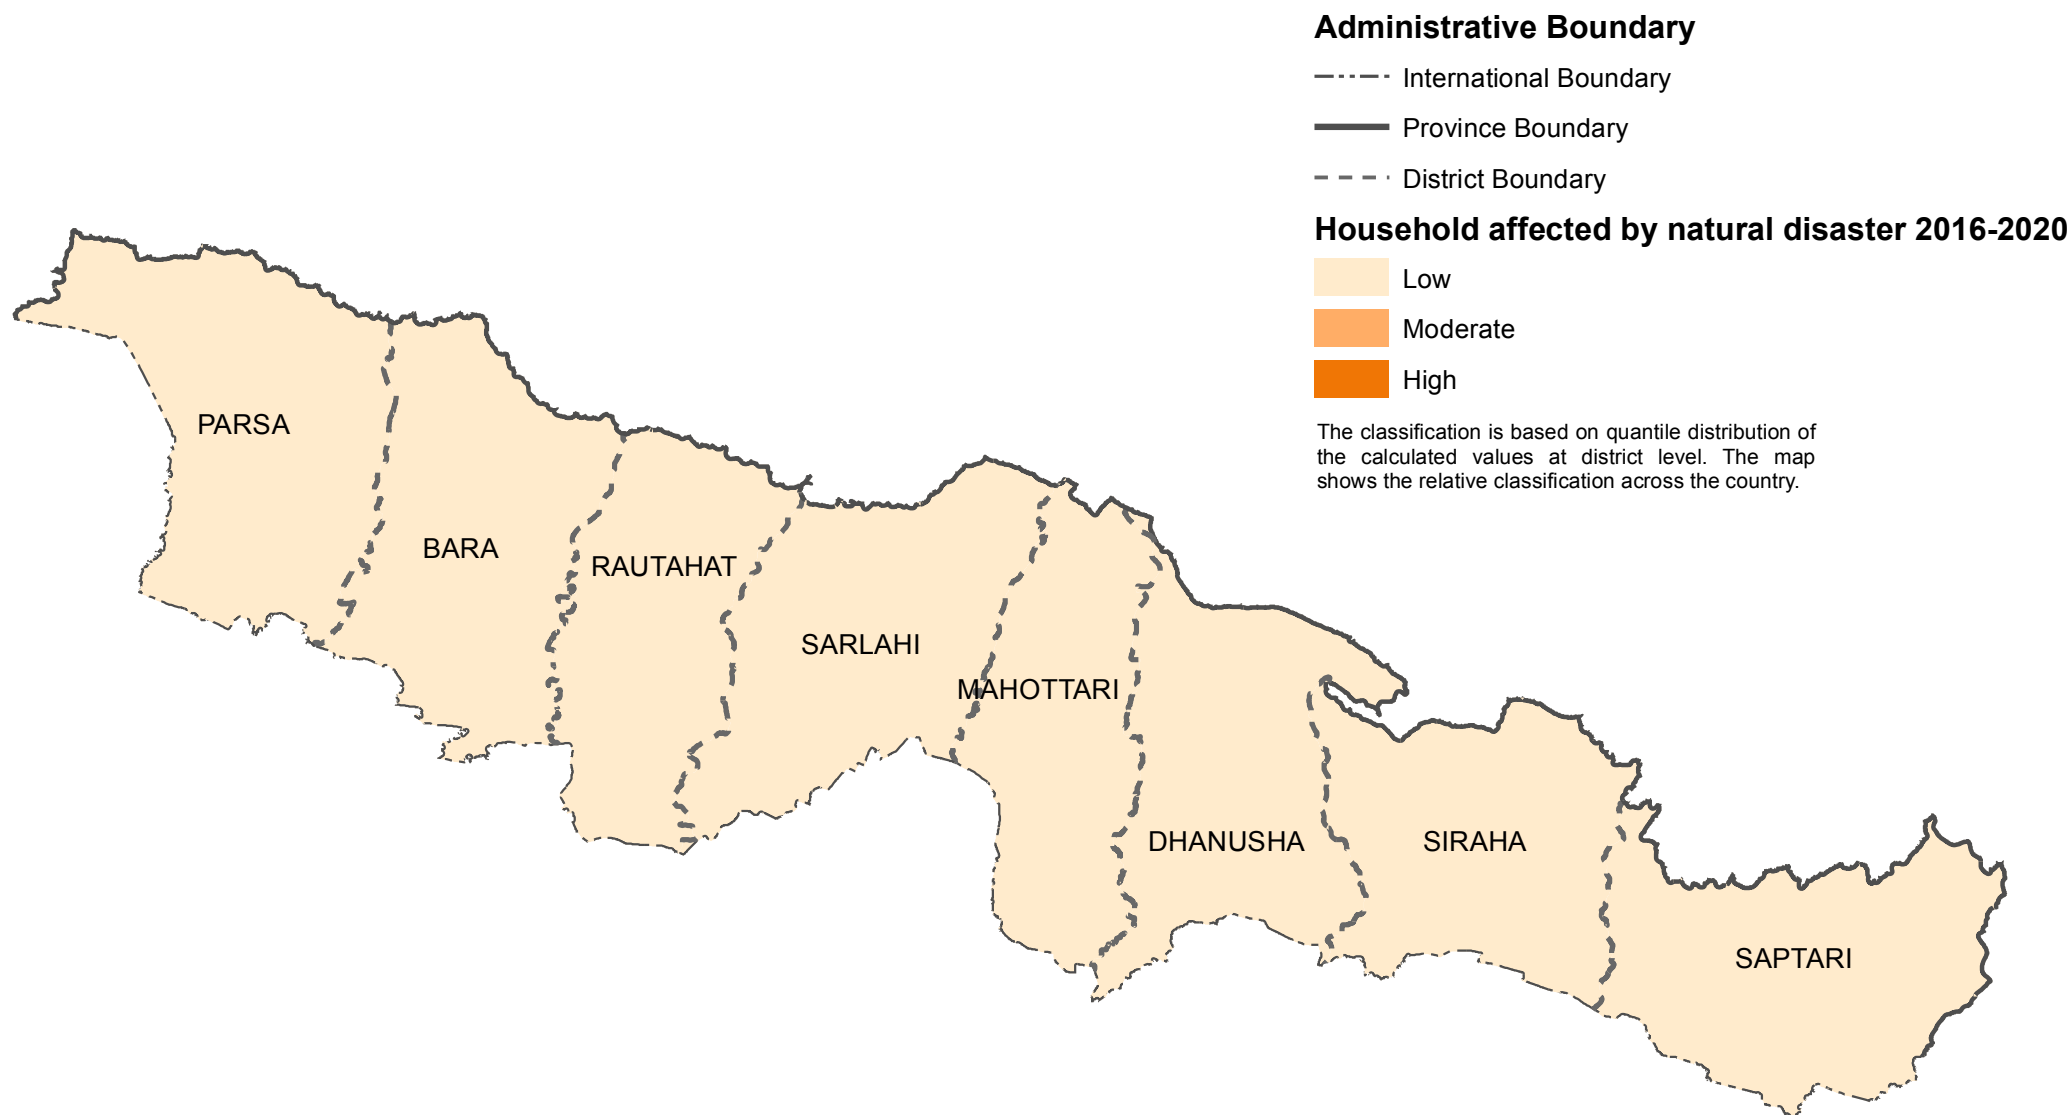

The estimated number of Sudden Acute Respiratory Illness cases arising in a given year, expressed as the rate per 100 000 population.

The classification is based on quantile distribution of the values at district level. The map shows the relative classification across the country.

Household affected by natural disaster 2016-2020 (Province Two)

Map data source(s):
Nepal Disaster Risk Reduction Portal

Note* :
This is a living document. We will be continuously editing and updating with revisions..

To account for increased vulnerability during the recovery period after a disaster, households affected by recent shocks in the past five years are considered. The affected households from the most recent year are considered fully while affected households from the previous years are scaled down with the factor 0.8, 0.6, 0.4, and 0.2 for the second, third, fourth, and fifth year, respectively, assuming that recovery decreases vulnerability progressively.

Nutritional status children (0-23 months) - Province Two

Percentage of newly registered children aged 0-23 months with a moderate or severe nutritional status
